PROFILE

Staff Software Engineer with 8+ years building high-scale distributed systems in Java, Spring Boot and Node.js. At UKG, developing People Fabric — a unified workforce data platform on AlloyDB (PostgreSQL) — via NRT event-driven pipelines with Kafka, while owning SLA compliance and mentoring engineers on distributed systems and production reliability. Previously at Walmart IDC, built and owned services serving millions of users — zero-to-production API design, Kubernetes deployments, Redis caching and full observability — for Virtual Try-On features shipped globally. Strong in system design (HLD/LLD), microservices architecture, and cloud-native delivery on Azure and GCP.

CORE COMPETENCIES

Distributed Systems & Microservices Architecture, Technical Leadership & Mentorship, Production Reliability & SLA Ownership, API Design & System Architecture, Cloud-Native Delivery (Azure, GCP), Event-Driven Architecture (Kafka)

TECHNICAL SKILLS

Languages & Frameworks

Java, Spring Boot, Node.js, JavaScript, TypeScript, Express.js, Angular 2+, Shell Scripting

Databases & APIs

MongoDB, Cosmos DB, PostgreSQL, Redis, REST APIs, GraphQL, SQL

DevOps & Cloud

Kubernetes, Docker, Kafka, Prometheus, Grafana, Jenkins, GitHub Actions, CI/CD, Git, Auth0, Postman, Azure, GCP

Practices

Microservices, Distributed Systems, Event-Driven Architecture, API Design, System Design, HLD/LLD, OOP, SOLID Principles, Domain-Driven Design (DDD), JUnit, Integration Testing, Agile/Scrum, Code Review, Technical Documentation

EXPERIENCE

UKG (Ultimate Kronos Group), Staff Software Engineer

- Aug 2025 – Present | Noida, India

- TRex Multi-Tenancy Onboarding:** Leading registration of w-pwfm-swpforecasting on TRex — UKG's tenancy platform — across Staging, Prod-US & Prod-EU. Authored automation shell scripts, configured Auth0 credentials, validated API payloads and orchestrated PSI creation; cut onboarding time from weeks to days.
- People Fabric:** Developing backend features within People Fabric — UKG's unified workforce data platform built on AlloyDB (PostgreSQL) — streaming WFM scheduling and labour entities via NRT event-driven pipelines to power real-time forecasting insights for enterprise tenants.
- Production Reliability & Leadership:** Own end-to-end SLA compliance and platform stability across global enterprise accounts; mentor engineers on distributed systems patterns and production reliability standards.

Technologies: Java, Spring Boot, REST APIs, Shell Scripting, Auth0, Kafka, GitHub Actions, JUnit, GCP, Jira, Confluence, PostgreSQL

Walmart IDC, Software Engineer III

- Dec 2022 – Jul 2025 | Bengaluru, India

- Virtual Try-On (CYOM/BYOM):** Delivered Create Your Own Model, Bring Your Own Model and multiplayer try-on features enabling customers to visualise clothing on body-matched avatars; shipped globally across all Walmart markets.
- Secure Media Service:** Led end-to-end design and build of a secure media service from scratch serving millions of users; developed internal APIs, implemented security controls, integrated with Cosmos DB and leveraged Redis for caching to optimize performance.
- Infrastructure & Observability:** Managed container deployments on Azure and built Prometheus and Grafana dashboards for production monitoring and alerting across microservices.
- Technical Mentorship:** Mentored junior engineers through code reviews, design discussions, and engineering best practices across Java and Node.js services.

Technologies: Node.js, GraphQL, Java, Spring Boot, Cosmos DB, Redis, Kubernetes, Docker, Prometheus, Grafana, Kafka, Jenkins, GitHub Actions, Azure

HealthAsyst, Software Developer

- Nov 2020 – Nov 2022 | Bengaluru, India

- MDustry (Telehealth):** Led end-to-end feature development on a telehealth platform — built REST APIs, authored JUnit tests, integrated third-party services, and resolved customer defects directly in client sync-ups.
- COCO App:** Owned features for a home remodelling platform end-to-end; authored high-level and low-level system architecture design diagrams (HLD/LLD) and improved platform performance.
- Engineering Quality:** Conducted code reviews for junior engineers, enforcing backend best practices across GraphQL APIs and Node.js services.

Technologies: Angular 10, GraphQL, HTML, Tailwind CSS, MongoDB, Node.js, Express.js, JUnit

Biz2Credit, Software Developer

- Jun 2019 – Oct 2020 | Noida, India

- HSBC-US Lending Platform:** Contributed to a fintech lending platform integrating third-party financial APIs including Experian credit checks and fraud verification modules within a regulated financial environment.

Technologies: Angular 4, Angular 6, TypeScript, REST APIs

Venturepact LLC, Associate Software Developer

- Jan 2018 – May 2019 | Jalandhar, India

- Built full-stack features across data models, REST APIs, and UI for a civic-tech platform aggregating political data and predicting election results from user reviews.

Technologies: MongoDB, Node.js, Angular 2+, Express.js

KEY ACHIEVEMENTS

Global Scale Delivery

Delivered Virtual Try-On (CYOM/BYOM) features shipped globally across all Walmart markets, enabling millions of customers to visualise clothing on body-matched avatars.

Onboarding Acceleration

Eliminated cold-start gaps in People Fabric by building bulk-load pipelines that backfill historical data into AlloyDB the moment an entity is first onboarded, instead of starting from an empty table.

Technical Leadership at Scale

Mentored engineers and led code reviews across UKG and Walmart, driving adoption of distributed systems best practices and raising engineering quality across teams.

PROJECTS

Multi-Tenant API Platform

Built a multi-tenant SaaS backend from scratch (Spring Boot, PostgreSQL, Redis) with tenant isolation enforced at the query layer, JWT authentication (Auth0-ready), per-tenant Redis-backed rate limiting, and request tracing via correlation IDs — containerized with Docker Compose and verified via GitHub Actions CI.
